

## POSTDOCTORAL FELLOWSHIP IN COGNITIVE AGING

The School of Psychology at Georgia Institute of Technology anticipates having one opening for a postdoctoral Fellowship on our NIH-sponsored Ruth L. Kirschstein training grant on “Research Training in Cognitive Aging” starting as early as August 1, 2017. A later starting date is negotiable. The duration of the traineeship is between 1 and 3 years (pending funding). Postdoctoral trainees work with core faculty members with research interests in cognitive aging, broadly defined: Audrey Duarte – neuroscience of memory; Christopher Hertzog – memory, metacognition, intelligence; **Scott Moffat – spatial cognition/navigation**, stress, hormonal influences on cognition; Daniel H. Spieler – attention, language processing, modeling; Paul Verhaeghen – attention, speed of processing, working memory; and Mark Wheeler – episodic memory and perceptual decision-making. There are also other faculty members affiliated with our training program who can collaborate with postdoctoral fellows. Stipend levels are set by the federal government and increase with years of postdoctoral experience. The traineeship provides travel funds, an allowance for research expenses, and an allowance for health insurance. Fellowships are restricted to U.S. citizens or permanent U. S. residents. Applicants should have completed a Ph.D. in psychology or a related discipline (e.g., cognitive neuroscience).

To apply, a cover letter, CV, statement of research interests identifying possible matches to at least one core faculty mentor, representative publication, and three letters of recommendation should be sent through the online portal at <https://academicjobsonline.org/ajo/fellowship/8852>. Please also list the names and contact information for your referees in the application cover letter. Applications received by **March 15, 2017** have the best chance of being reviewed for available fellowships, but applications will be accepted and reviewed until the position is filled. Applications from ethnic and racial minorities, persons with disabilities, and persons from economically and/or culturally disadvantaged backgrounds are strongly encouraged (<https://researchtraining.nih.gov/resources/faq#Diversity>).
